                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         900
         Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           DB DB

"Molecular cloning and analysis of two subunits of the human TFIID complex: hTAFII130 and hTAFII100.";

Proc. Natl. Acad. Sci. U.S.A. 93:13611-13616(1996).

-I- FUNCTION: MAKES PART OF TFIID IS A MULTIMERIC PROTEIN COMPLEX THAT PLAYS A CENTRAL ROLE IN MEDIATING PROMOTER RESPONSES TO VARIOUS ACTIVATORS AND REPRESSORS. POTENTIATES TRANSCRIPTIONAL ACTIVATION BY THE AF-2S OF THE RETINOIC ACID, VITAMIN D3 AND THYROID HORMONE.

-I- SUBUNIT: TFIID IS COMPOSED OF TATA BINDING PROTEIN (TBP) AND A NUMBER OF TBP-ASSOCIATED FACTORS (TAFS).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     MEDLINE-97336072; PubMed-9192867;

-1- FUNCTION: TRANSCRIPTION FACTOR THAT APPEARS TO BE REQUIRED FOR THE T-CELL-RECEPTOR-MEDIATED TRANS ACTIVATION OF HIV-2 GENE EXPRESSION. BINDS SPECIFICALLY TO TWO PURINE-RICH MOTIFS IN THE EXPRESSION. BINDS SPECIFICALLY TO THE UNDERPHOSPHORYLATED FORM OF RB.

HIV-2 ENHANCER, ELF-1 BINDS TO THE UNDERPHOSPHORYLATED FORM OF RB.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 DOMAIN

                                                       Purnelle B., Goffeau A.;
Submitted (APR-1996) to the EMBL/GenBank/DDBJ databases.
-I- FUNCTION: INVOLVED IN PHEROMONE-INDUCED MORPHOGENESIS AND
-I- SUBCELLULAR LOCATION: LOCALIZES A SHARP PATCH AT THE SHMOO TIP
(MATING PROJECTION) WHICH IS THE SITE OF POLARIZED CELL GROWTH.
-!- SIMILARITY: TO PROTEINS THAT FORM COILED-COIL STRUCTURES.
                                                                                                                                                                                "The SPA2 gene of Saccharomyces cerevisiae is pheromone-induced morphogenesis and efficient J.
